AKIB DABGAR

Full-Stack Developer
Ahmedabad, India
dabgarakib@gmail.com | +91 8732989596 | linkedin.com/in/akib-dabgar

Professional Summary

Full-Stack Developer with 3+ years of experience building scalable web applications using React.js, Node.js, and NestJS. Experienced in developing end-to-end applications, creating responsive user interfaces, building secure RESTful APIs, and working with SQL and NoSQL databases. Skilled in microservices architecture, RabbitMQ, JWT authentication, role-based access control (RBAC), real-time systems, and fintech payment integrations. Leveraged AI-assisted development tools such as Cursor and Claude to accelerate development, improve code quality, and enhance team productivity.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL
Frontend: React.js, Redux, Redux-Saga, Next.js
Backend: Node.js, Express.js, NestJS
Databases: MongoDB, MySQL, PostgreSQL
Message Queues & Tools: RabbitMQ, Docker, Socket.io, SignalR
Architecture: Microservices Architecture, Event-Driven Architecture, Scalable System Design
AI Tools & Development: AI-Assisted Development using Claude and Cursor
Payment Integrations: QorPay, MassPay, US Bank ACH
Development Tools: Git, GitHub Actions, GitLab, Bitbucket, Postman, Firebase, Puppeteer, SendGrid

Professional Experience

Full-Stack Developer Jan 2023 – Present
eSparkBiz Technologies Pvt. Ltd., Ahmedabad

- Architected and maintained scalable RESTful APIs and full-stack applications using React.js, Node.js, and NestJS for multiple enterprise clients.
- Engineered JWT authentication and role-based access control (RBAC) systems with AES encryption across frontend and backend layers.
- Optimized MySQL and PostgreSQL queries through strategic indexing and query restructuring, achieving 40% reduction in database response times.
- Designed event-driven microservices architecture leveraging RabbitMQ for decoupled, fault-tolerant message processing and improved system resilience.
- Implemented virtualization in frontend report modules to efficiently handle thousands of reports, improving scrolling performance and user experience.
- Collaborated within Agile teams using Git, GitLab, and Bitbucket following industry best practices and deployment standards.
- Translated complex business requirements into technical specifications and delivered scalable solutions on schedule.
- Implemented Redis-based caching strategies to reduce API response times and improve application scalability.

Projects

ChainIT Pay — NestJS, React.js, PostgreSQL, RabbitMQ, QorPay, MassPay, US Bank ACH

- Architected scalable microservices payment platform supporting secure transactions and automated payment distribution workflows for multiple recipients.
- Integrated QorPay, MassPay, and US Bank ACH APIs enabling seamless fund transfers and real-time transaction status tracking across platforms.
- Engineered transaction workflows and ledger systems with PostgreSQL schemas ensuring ACID compliance, data integrity, and audit trail capabilities.

- Built event-driven microservices using RabbitMQ for asynchronous payment processing, improving system throughput and fault tolerance.
- Developed webhook handlers for real-time payment updates, settlement notifications, chargeback management, and automated payout synchronization.
- Systematized daily Cron Jobs aggregating QorPay deposit data and persisting transaction records for real-time frontend reporting and stakeholder visibility.
- Constructed React admin dashboard with comprehensive transaction management, deposit tracking, and payment workflow configuration capabilities.
- Enforced JWT authentication, role-based access control, and AES encryption protecting sensitive payment data and ensuring regulatory compliance.

Tax Sale Management System (TSM) — React.js, Redux-Saga, Node.js, Express.js, MySQL

- Architected enterprise-grade property tax platform for county officials managing tax lien sales, foreclosures, auctions, and redemption workflows.
- Enhanced frontend using React with Redux-Saga handling complex state management across 20+ feature modules and asynchronous operations.
- Engineered intelligent scheduling system automatically enforcing statutory and legal deadlines for property tax sales, redemptions, and compliance requirements.
- Constructed automated notification system using SendGrid for email alerts and post-sale document management with deadline tracking.
- Orchestrated complex business logic for property redemptions, payment plans, user privilege levels, and comprehensive financial reporting functionality.
- Executed role-based access control (RBAC) with granular admin and county-level permissions across frontend and backend systems.
- Integrated Puppeteer for dynamic PDF generation, automating compliance document creation and reducing manual processing by 80%.

Radefy — React.js, Redux, SignalR (PWA)

- Architected multi-tenant SaaS hotel management platform with role-based dashboards for Admin, Customer, and Guest users based on subscription tiers.
- Constructed guest portal builder tool enabling hotel managers to create custom, branded mobile-accessible applications without coding requirements.
- Enhanced real-time messaging using SignalR enabling seamless, low-latency communication across admin, customer, and guest portals.
- Engineered unified messaging interface supporting multiple communication channels (WhatsApp, Telegram, Viber) for streamlined guest interactions.
- Integrated React components with backend property management system APIs ensuring reliable PMS data synchronization and consistency.
- Optimized platform as Progressive Web App (PWA) with fast loading, offline capabilities, and Redux state management across all user portals.

Education

Master of Computer Applications (MCA) 2021 – 2023
Saurashtra University

Bachelor of Computer Applications (BCA) 2018 – 2021
Shree G.K. & C.K. Bosamia College
